CERTIFICATE OF ANALYSIS  
BFITC CONJUGATE  
LOT #10616A

Contents:

When reconstituted with 0.4 ml of water, each vial contains 0.2 mg of protein in 0.01 M sodium phosphate, pH 7.5.

Concentration:

Determined by the method of Bradford.<sup>1</sup>

Preparation:

BFITC is prepared by conjugating the B subunit of cholera toxin (cholera toxinogenoid) to fluorescein isothiocyanate, isomer I (FITC) by a modification of the method of Wood *et al.*<sup>2</sup>

Activity:

When compared to a standard solution of B subunit at the same protein concentration, B-FITC exhibits comparable ganglioside binding activity in a hemagglutination assay. In immunodiffusion studies, B-FITC shows comparable immunoprecipitation to unconjugated standard when reacted against a specific antiserum to B subunit. Lot 10616A contains 14.3 µg of FITC bound per mg of cholera toxin B subunit (cholera toxinogenoid), assuming an extinction coefficient at 493 nm of 85,200 M<sup>-1</sup>cm<sup>2</sup> for FITC.<sup>3</sup>

Packaging/Storage:

This product is provided as a lyophilized powder, sealed under vacuum. Store at 4°C prior to and following reconstitution. This product is light sensitive.

Handling:

Good laboratory technique should be employed in the safe handling of this product. This requires observing the following practices:

1. Wear appropriate laboratory attire including a lab coat, gloves and safety glasses.

(continued)

2. Do not mouth pipette, inhale, ingest or allow to come into contact with open wounds. Wash thoroughly any area of the body which comes into contact with the product.
3. Avoid accidental autoinoculation by exercising extreme care when handling in conjunction with any injection device.
4. This product is intended for research purposes by qualified personnel only. It is not intended for use in humans or as a diagnostic agent. List Biological Laboratories, Inc. is not liable for any damages resulting from the misuse or handling of this product.

**FOR RESEARCH PURPOSES ONLY. NOT FOR HUMAN USE.**
